**05/2015: Facebook Instant Articles** announced

**09/2015: Apple News** released with iOS 9

**10/2015: Google AMP** announced

**02/2016: AMP** versions appear in mobile search results: top stories

**03/2016: Facebook IA** support native ads

**04/2016: Facebook AI** announce availability to all publishers

**08/2016: AMP** preview for AMPed search results

**09/2016: Apple News 2** released with iOS 10

**09/2016: AMP** in global mobile search results

**10/2016: AMP** celebrates its first birthday 🎂

**WordPress** — AMP'd up tens of millions of websites

**Reddit** — Announced tens of millions of pages in AMP

**Bing** — iOS and Android app supports AMP

**Ebay** — AMP'd up 15 million product category pages

What is AMP?

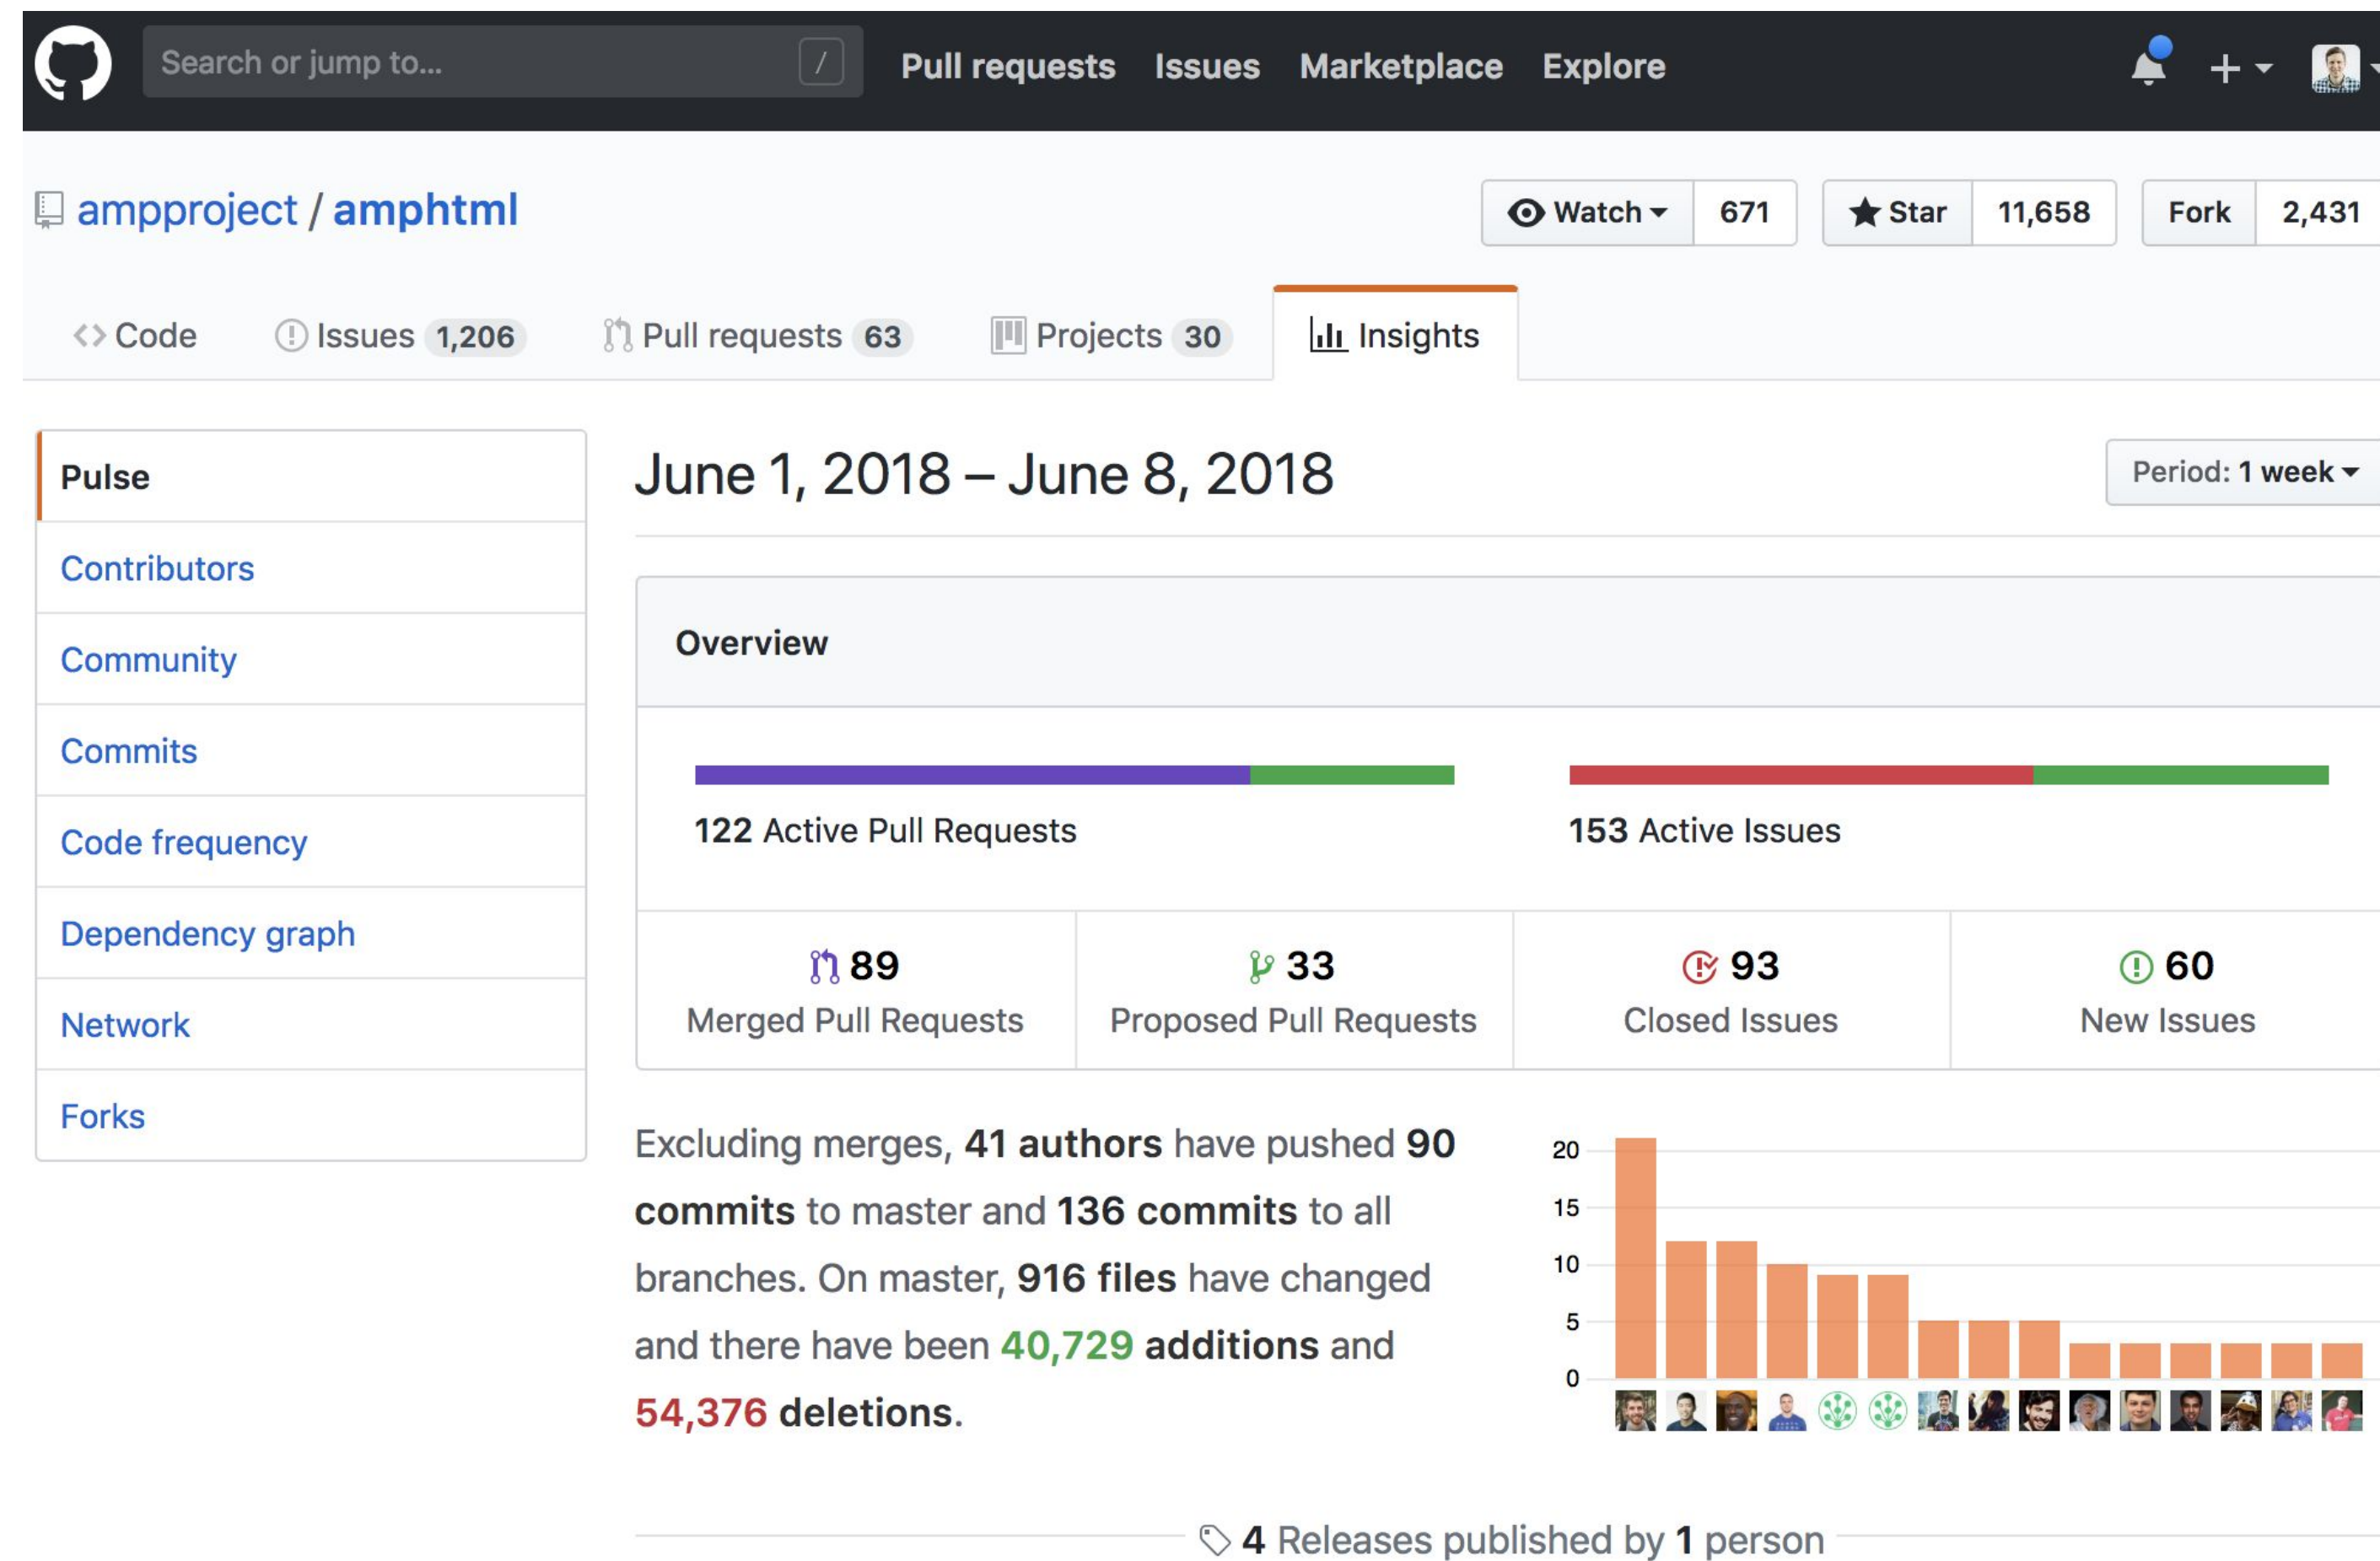

“AMP is an **open-source library** that provides a **straightforward way** to create **web pages** and **email** that are compelling, smooth, and load near instantaneously for users.”

“AMP builds on your existing skill sets and frameworks to create web pages. AMP is supported by many different platforms, and it's **compatible across browsers.**”

Source: [What is AMP?](#) (emphasis mine)

# AMP: An open-source library

# AMP: Three core pieces

- **AMP HTML** is HTML with some restrictions for reliable performance.
- The **AMP JS** library
  - Implements all of AMP's best performance practices
  - Manages resource loading via asynchronous requests
  - Sandboxing of all iframes
  - Pre-calculating layout of every element
  - Disabling of slow CSS selectors
- **Google AMP Cache**
  - proxy-based content delivery network
  - Assets load from the same origin via HTTP 2.0
  - Built-in validation

# AMP: A straightforward way to create web pages

Must Have

```
<!doctype html>
<html >
  <head>
    <meta charset="utf-8">
    <link rel="canonical" href="hello-world.html">
    <meta name="viewport" content="width=device-width,minimum-scale=1,initial-scale=1">
    <style amp-boilerplate>body{-webkit-animation:-amp-start 8s steps(1,end) 0s 1 normal bot
    <script async src="https://cdn.ampproject.org/v0.js"></script>
  </head>
  <body>Hello World!</body>
</html>
```

# AMP: No JavaScript, but AMP Components

AMP Components include their own JavaScript

- amp-sidebar
- amp-carousel
- amp-lightbox
- amp-bind
- amp-date-picker
- amp-live-list

AMP	
<a href="#">amp-sticky-ad</a>	Provides a way to display and stick ad content at the bottom of the page.
Dynamic content	
COMPONENT	DESCRIPTION
<a href="#">amp-access-laterpay</a>	Allows publishers to easily integrate with the <a href="#">LaterPay</a>  micropayments platform.
<a href="#">amp-access</a>	Provides an AMP paywall and subscription support.
<a href="#">amp-bind</a>	Allows elements to mutate in response to user actions or data changes via data binding and simple JS-like expressions.
<a href="#">amp-buyside</a>	Displays dynamic content from the <a href="#">Buyside</a> service  .

# AMP: No External CSS or Inline Element Styles

Instead use inline stylesheet.

```
<style amp-custom>
```

... Max 50 KB of inline styles

```
</style>
```

# AMP: Custom fonts via <link> or @font-face

Using <link> tag with fonts from:

- Typography.com: <https://cloud.typography.com>
- Fonts.com: <https://fast.fonts.net>
- Google Fonts: <https://fonts.googleapis.com>
- Typekit: <https://use.typekit.net>
- Font Awesome: <https://maxcdn.bootstrapcdn.com>

Using @font-face with amp stylesheet.

```
<style amp-custom>
  @font-face {
    font-family: "Bitstream Vera Serif Bold";
    src: url("https://somedomain.org/VeraSeBd.ttf");
  }

  body {
    font-family: "Bitstream Vera Serif Bold", serif;
  }
</style>
```

# AMP: Disallowed CSS

- `margin: 0 !important`
- `filter: greyscale(20%);`
- `-amp-` class and `i-amp-` tag names
- Transition property & `@keyframes`: Only GPU-accelerated properties (currently opacity, transform)
- None of the more exotic properties, e.g. `behavior`, `moz-binding`

# AMP: Disallowed HTML

## Disallowed HTML

- `<img>`
- `<video>`
- `<audio>`
- `<iframe>`

## AMP Replacements to prioritize content loading

- `<amp-image>`
- `<amp-video>` or other player components,  
e.g. `<amp-jwplayer>`, `<amp-youtube>`
- `<amp-audio>`
- `<amp-iframe>`

# AMP: Forms

Require use of [<amp-form>](#)

- Requires amp-form-0.1.js
- Allowed inputs and fields: Other form-related elements, including: `<textarea>`, `<select>`, `<option>`, `<fieldset>`, `<label>`, `<input type=text>`, `<input type=submit>`, and so on.
- Also allowed inside of `<form method=POST action=xhr>`, `<input type=password>` and `<input type=file>`
- Disallowed `<input type=button>`, `<input type=image>`
- Also disallowed, Most of the form-related attributes on inputs including: `form`, `formaction`, `formtarget`, `formmethod` and others.

## AMP: <amp-sidebar>

- A sidebar provides a way to display meta content intended for temporary access (navigation links, buttons, menus, etc.).
- The amp-sidebar should be a direct child of the <body>.
- It must have a layout of nodisplay

```
<amp-sidebar id="sidebar"
  layout="nodisplay"
  side="right">
  <amp-img class="amp-close-image"
    src="/img/ic_close_black_18dp_2x.png"
    width="20"
    height="20"
    alt="close sidebar"
    on="tap:sidebar.close"
    role="button"
    tabindex="0"></amp-img>
  <ul>
    <li>
      <a href="/">Home</a>
    </li>
    <li>Nav item 1</li>
    <li>
      <amp-fit-text width="220"
        height="20"
        layout="responsive"
        max-font-size="24">
        Nav item 2 - &lt;amp-fit-text&gt;
      </amp-fit-text>
    </li>
```

## AMP: <amp-carousel>

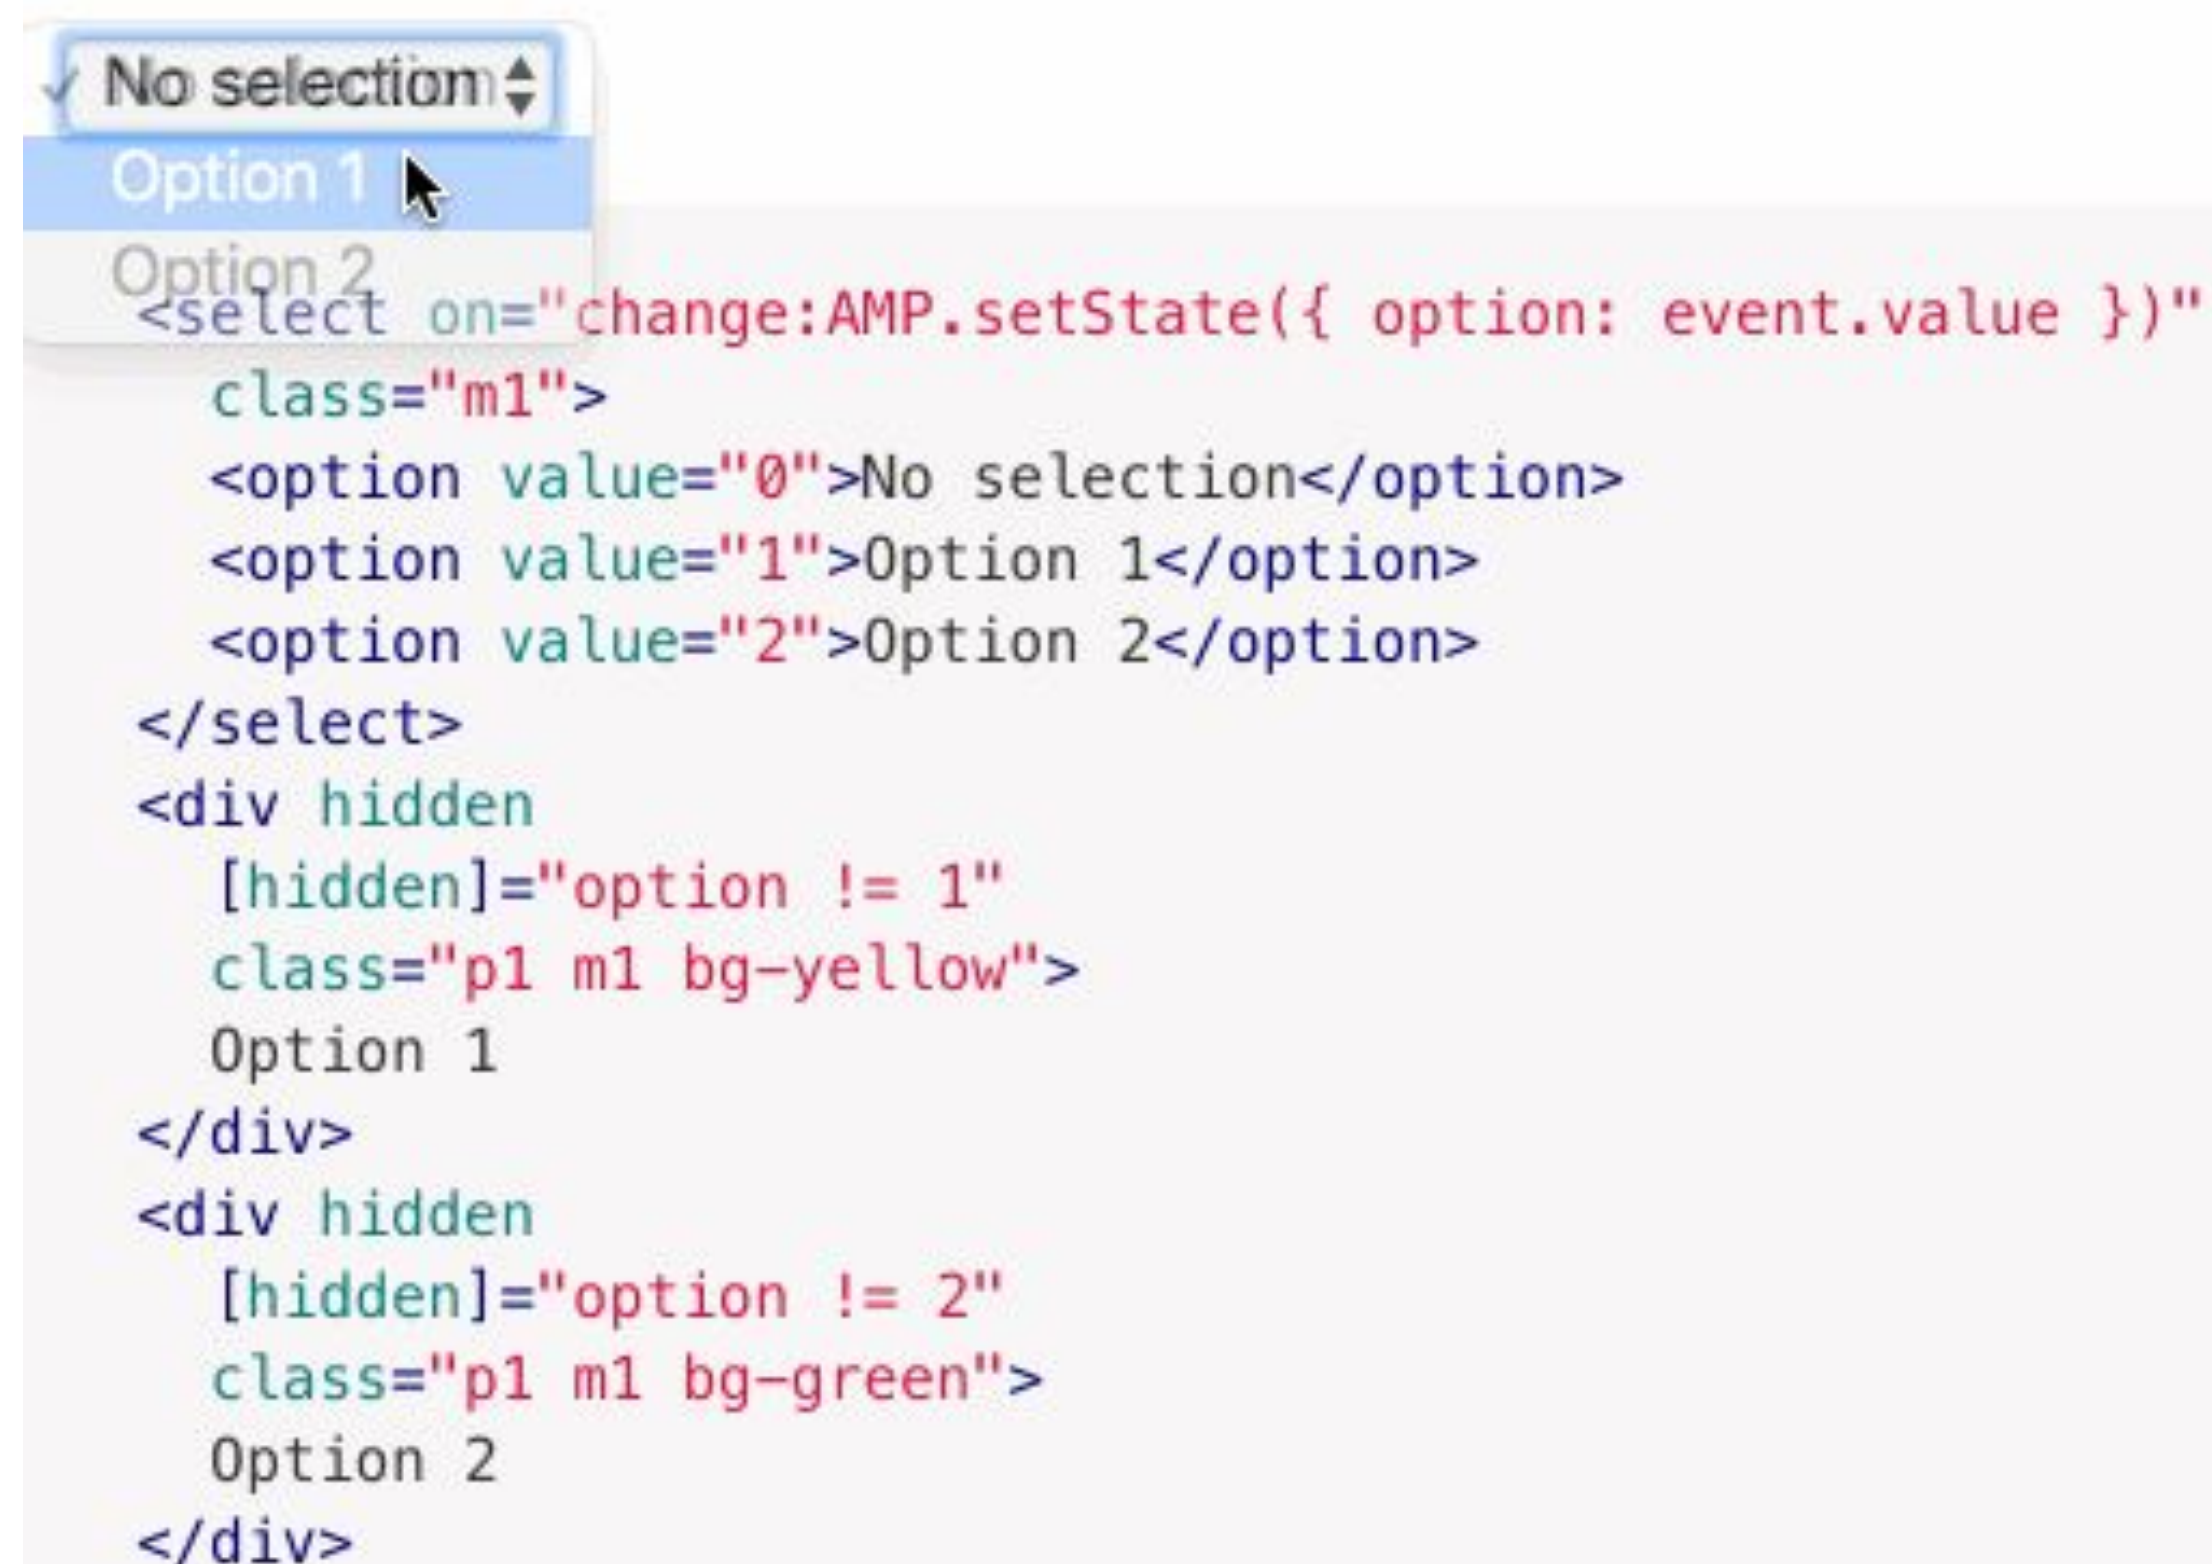

```
<amp-carousel width="400"
  height="300"
  layout="responsive"
  type="slides"
  autoplay
  delay="2000">
  <amp-img src="/img/image1.jpg"
    width="400"
    height="300"
    layout="responsive"
    alt="a sample image"></amp-img>
  <amp-img src="/img/image2.jpg"
    width="400"
    height="300"
    layout="responsive"
    alt="another sample image"></amp-img>
  <amp-img src="/img/image3.jpg"
    width="400"
    height="300"
    layout="responsive"
    alt="and another sample image"></amp-img>
</amp-carousel>
```

## AMP: <amp-bind>

- allows you to add custom interactivity to your pages beyond using AMP's pre-built components.
- It works by mutating elements in response to user actions via data binding and JS-like expressions.

```
<select on="change:AMP.setState({ option: event.value })"
  class="m1">
  <option value="0">No selection</option>
  <option value="1">Option 1</option>
  <option value="2">Option 2</option>
</select>
<div hidden
  [hidden]="option != 1"
  class="p1 m1 bg-yellow">
  Option 1
</div>
<div hidden
  [hidden]="option != 2"
  class="p1 m1 bg-green">
  Option 2
</div>
```

**Bing** — iOS and Android app supports AMP

**Ebay** — AMP'd up 15 million product category pages

**01/2017: AMP** announces TripleLift serving AMP Ads

**02/2017: AMP** provides access to the canonical URL

**04/2017: AMP** announces <amp-install-serviceworker> for PWA

**05/2017: AMP** announces enhanced analytics support

**08/2017: AMP** launches Fast Fetch ads

**09/2017: AdWords** announces AMP page delivery from the Google AMP Cache

Before

2016

2017

2018

**01/2018: AMP** announces new version of AMP Cache based on Web Packaging

**02/2018: Google** announces AMP email

**03/2018: AMP** [communicates AMP-based tech and web standards](#)

**04/2018: AMP** announces <amp-consent> for GDPR

**05/2018: AMP** promotes <amp-geo> component for dynamic geo-personalization

**07/2018: Google** mobile search includes page speed as ranking factor

# AMP: It's Fast!

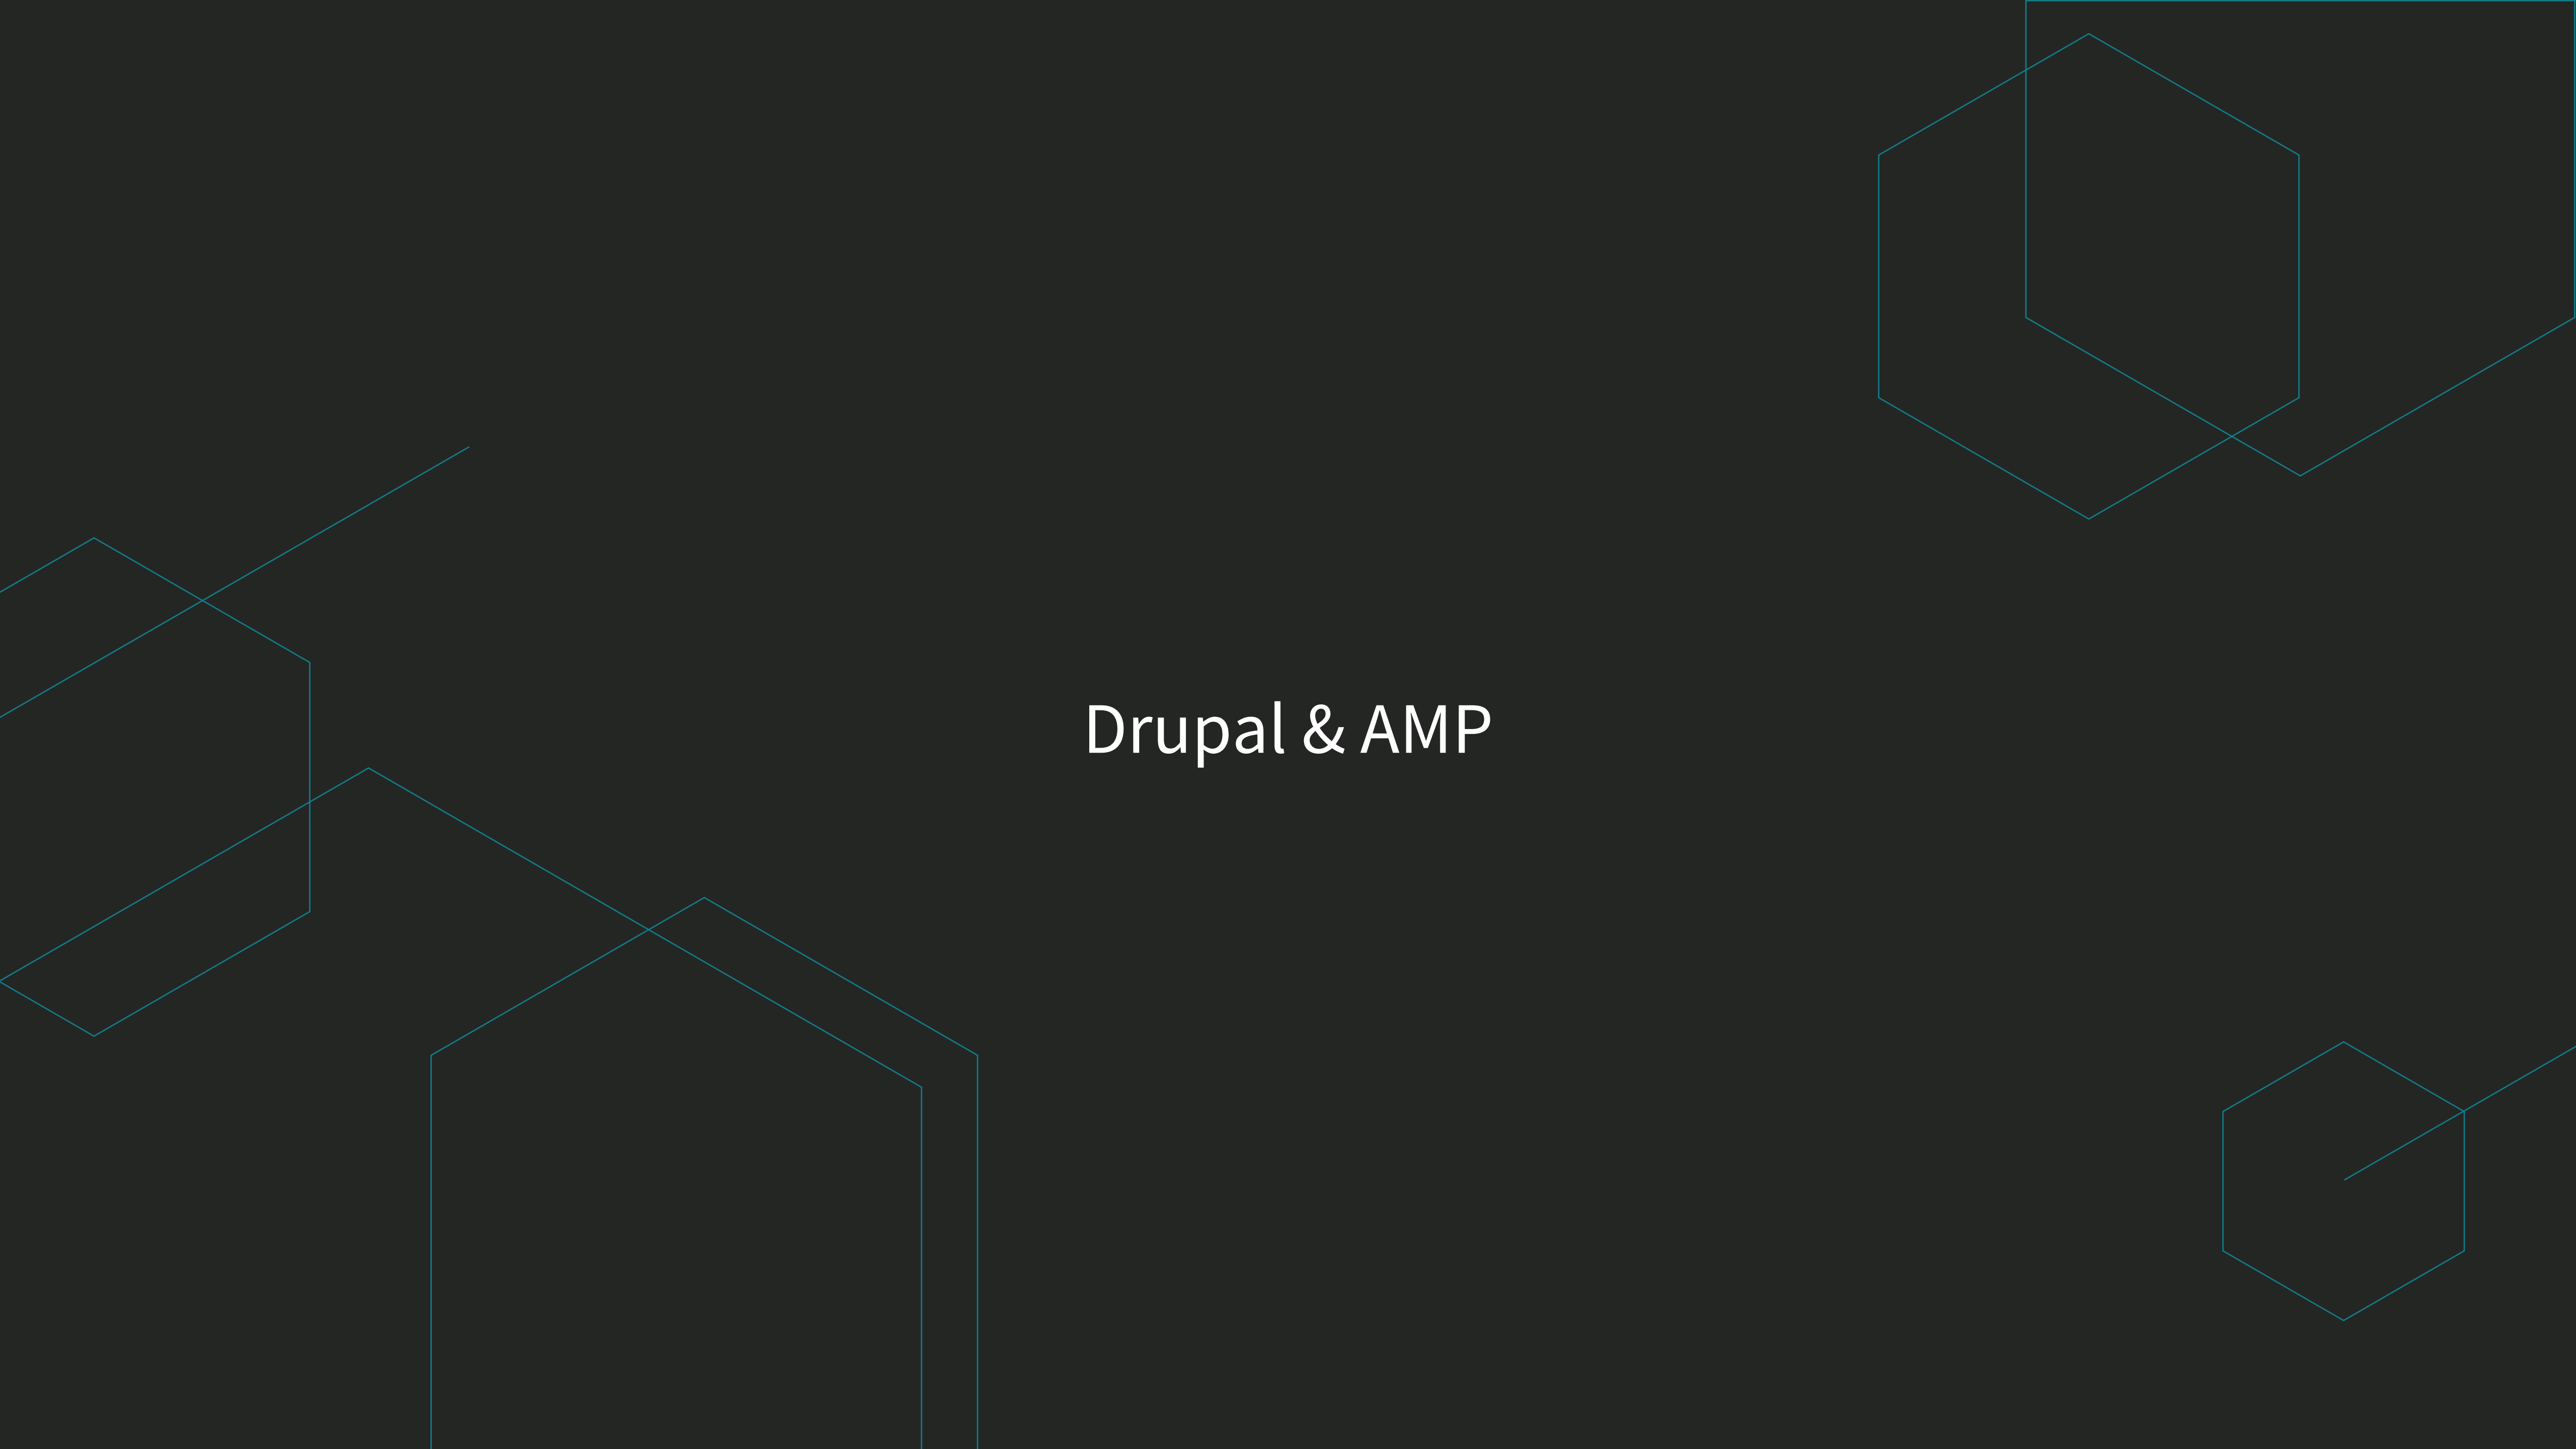

# AMP: Resources

- [AMP Roadshow Events](#): Seattle, Austin, New York, Cambridge, Vancouver
- [AMP Project](#) site: docs, references, tools, blog, etc.
- [AMP by Example](#): A hands-on introduction to Accelerated Mobile Pages (AMP) focusing on code and live samples. Learn how to create AMP pages and see examples for all AMP components.
- [AMP Start](#): Starter templates and components
- [Google Code Labs](#): search for AMP and find AMP related tutorials for download
- [AMP Playground](#): live sandbox demonstrations
- [Chrome AMP validator extension](#)

# Drupal & AMP

# Drupal & AMP: What's Required

All code supported by our friends at Lullabot

- [Drupal AMP Theme](#) 7.x-1.0, **8.x-1.1** (recommended) and 8.x-3.x versions
- [Drupal AMP Module](#) 7.x-1.0, 8.x-1.2, **8.x-2.1** (recommended) and 8.x-3.x versions
- [AMP Library](#) 1.1.3

# Drupal & AMP: The D8.1 AMP Theme

- What you get
  - Strips incompatible markup, element attributes and JavaScript
  - Adds boiler plate AMP HTML, JS and CSS requirements
  - Method for adding inline CSS stylesheet
  - Prepared template files to render valid AMP HTML
    - A field image.html.twig template to render <amp-image> element.
- What you don't get
  - Any other configuration options
  - A method for adding <amp-sidebar> for off-canvas navigation

# Drupal & AMP: The D8.2x AMP Module

- What you get
  - Provides ability to enable AMP display modes for content types
  - Provides AMP formatters for text, image, and video fields to prepare as AMP components/markup
  - Adds `<link rel="amphtml">` to point to AMP path at `node/article-title?amp=1`
  - Provides services to render the AMP display mode using the configured AMP theme
  - Google Analytics, AdSense Publisher ID, oogle DoubleClick for Publishers Network ID configuration
  - `<amp-pixel>` configuration
- What you don't get
  - Other AMP components, e.g. `<amp-sidebar>` for navigation
  - An AMP first approach

# Drupal & AMP: The D8.3x AMP Theme & Module

- Experimental Features for an AMP first approach
- Adds flexibility to formatter development with new traits
- Adds new AMP carousel and image formatters
- Add <amp-sidebar> logic and uses the admin toolbar as an example
- Adds <amp-\*> social sharing provider formatters
- And many more improvements

The background is a dark gray color. It features several teal-colored hexagonal outlines. In the top right corner, there is a cluster of three overlapping hexagons. In the bottom right corner, there is a single hexagon with a line extending from its top-right vertex towards the right edge of the frame. On the left side, there are two overlapping hexagons, and below them, a larger, more complex geometric shape composed of several connected lines, including hexagonal segments.

Your Drupal Project

# Your Drupal Project: AMPing it

## Existing Project

- Ok, with limited site parity on AMP page versions, use recommended project versions
- Need more parity, use recommended project versions with more custom theme logic
- Lots of parity, consider recommended or 3.x project versions
  - Prioritize AMP components and coordinate with project maintainers

## New Project

- Ok, with limited site parity on AMP page versions, use recommended project versions
- Need more parity, consider recommended or 3.x project versions
  - Prioritize AMP components and coordinate with project maintainers

# Your Drupal Project: Performance

## Existing Solutions

- Using component based rendering with use of `my_module.libraries.yml` or `my_theme.libraries.yml` to minimize the per-page CSS and JS assets
- Responsive and optimized image assets
- Using performance audit tools, e.g. Chrome Lighthouse Audit
- [DrupalCon Nashville 2018: Get a perfect 100 in Google PageSpeed](#) by Mike Carper
